1. About this user manual

This manual describes the installation and usage of the Development Desktop 2.0 (DD2.0) User Interface; a Windows based PC software application and related embedded firmware/software developed by Bosch Sensortec for demonstration and evaluation of sensors.

1.1 Who should read this manual

This information is intended for users who want to design and implement robust sensor functionality into their applications.
2. Development Desktop 2.0

2.1 Overview

The Bosch Sensortec Application/ Development board is a universal demonstration and development environment for Bosch Sensortec sensor products. Based on a powerful ARM7 microcontroller, the Application/ Development board is used to configure all sensor parameters using a PC based software. Sensor data can be read, displayed, and captured on the attached PC.

The Application/ Development board uses a flexible universal shuttle board concept. Bosch Sensortec sensors are mounted on sensor specific shuttle boards. All sensors shuttle boards have an identical footprint and can be plugged into the Application/Development board's shuttle board socket. The PC software automatically detects the sensor that has been plugged in and starts the corresponding software application.

Graphical display:
The DD2.0 UI displays the sensor signals and interrupt signals in three different graphical formats.

Data logging:
The DD2.0 offers data logging of the measured sensor and field strength signals.

Configuration of the sensor:
Sensor parameters is configured using the DD2.0 Development Desktop.
For communication with the sensor, the DD2.0 software supports both SPI and I²C.

2.2 Key Features

- Real time sensor signal monitoring
- Interface to Bosch Sensortec sensor shuttle boards
- USB 2.0 full speed interface
- RS 232 interface
- Bluetooth Interface (Application Board Only)
- Sensor data acquisition
- Sensor configuration and register access
- Interrupt configuration and monitoring
- Firmware upgrade via micro SD/SDHC card, USB, UART
- On the fly change of SPI/I2C Interface of the sensors
- Windows 7, 8, 10 compatible
- Installer supports 32 and 64 bit versions
3. Installation

The procedure to install DD2.0 is described in this section.

3.1 System requirements

- **Operating system**: Windows 10, Windows 8 and Windows 7 (32/64 bit)
- **Required software**: Microsoft .NET Framework 4.0 or higher
- **Memory**: 1 GB
- **Processor**: 1 GHz or higher (Recommended)
- **Host controllers**: USB 2.0

3.2 Installing the software

Follow the steps below to install DD2.0:

1. Insert the software installation disc in the computer’s CD/DVD drive.
2. Double-click the `DevelopmentDesktop20_VX.X.exe` icon to install the files.
3. Follow the instructions on the screen. In `DevelopmentDesktop20_VX.X`, XX is the current UI version.
4. Read the text in the introduction window and click **Next**.

5. The **License Agreement** dialog appears. If you agree with the Software Licence Agreement, then select **I accept the agreement**.
6. Click **Next**.

![Figure 1. Installation setup window](image-url)
7. By default, DD2.0 is installed in `C:\Program Files\Bosch Sensortec\Development Desktop 2.0`. Click **Browse** to change the destination directory.

8. Click **Next**.
9. The **Select Components** dialog box appears. If the patch installer files are in current directory folder, the corresponding check box will be enabled and checked, else it will be disabled. If you do not want those files to be installed, just uncheck the corresponding checkbox.

   By default, **without help** is selected, if **with help** is needed, the corresponding file (Help File) needs to be placed in the current directory folder.

10. After selecting the check boxes of the required files, click Next.
11. Select folder name, and click Next.
12. The **Ready to install** dialog box appears. Click **Install**.
13. When the software installation is complete, the following information related to USB driver pops up. Click Next.
3.3 Installing USB Drivers

For details on USB driver installation, refer to USB Driver Installation Guide under USB Driver folder in the Development Desktop 2.0 installation directory.

3.4 Uninstalling DD2.0

The uninstall program removes all the DD2.0 components from the system. This includes DD2.0 software files, directories, folders, and registry key items.

Execute the following procedure to uninstall the DD2.0 software:

1. Close DD2.0.
2. Click Start > Development Desktop 2.0 > Uninstall Development Desktop 2.0.
3. The uninstaller dialog box appears. Click Yes.
Figure 9. Uninstall DD2.0
4. Getting started

4.1 Setting up the Board-PC connection

Follow below procedure to connect board to the PC via USB.

1. Use the Installer to install DD2.0. Insert the shuttle board to the Application /Development Board.

2. Connect the board to the PC using the USB cable.

3. Switch on the board by turning the switch to ON. On the board, you can start DD2.0 once the LED glows green.

4. On the development board, the VDD setting should be as shown in the below image. Jumper J4 is connected to Ref and Jumper J3 is connected to 3.63 V.
4.2 Start up window

To start the DD2.0 software:

- Click **Start** > **Programs** > **Development Desktop 2.0**.

  Or

- Double click the DD2.0 software icon on the desktop.

The Graphical User Interface (GUI) appears as seen below. Based on the type of sensor connected, the default view is loaded.

![DD2.0 Graphical User Interface (GUI)](image)

When the board and PC are connected, the status indicator glows green.

- To plot the sensor signals on the graph, click **Start**.
- To end plotting, click **Stop**.

---

**Figure 10. DD2.0 Graphical User Interface (GUI)**
5. Working with DD2.0

5.1 Checking the connection status of the board

When the Application/Development Board is connected to the PC, Connection Status glows green. If there is any error, Connection Status will not glow.

Note: If there is an error in connection, check the connection between Application/Development board and PC again.

5.2 Changing the graph settings

This section describes the different graph settings options in the DD2.0.

5.2.1 Selecting the data channel

To select the signals (x, y and z) shown on the graph, perform Channel Selection. By default, all channels are displayed. To show or hide a channel, check or uncheck the respective checkbox.

5.2.2 Selecting the sensor data representation unit

Select any of the units for your sensor.

5.2.3 Selecting interrupt data
The sensor interrupt lines can be monitored on the data graph by enabling the respective interrupts from the interrupt menu on the graph.

### 5.2.4 Selecting color

![Figure 14. Selecting color](image)

Different colours are used to distinguish between the three axes’ signals in the plotted graph. These colors, along with background color of the graph can be modified using **Channel Selection**.

### 5.2.5 Graph Utilities

The graph utilities as seen below are used for enhanced user experience.

<table>
<thead>

</tr>
<tr>
<td></td>
<td>Print preview the current instance of the graph</td>
</tr>
</tbody>
</table>
5.2.6 Reset

It will reset the Graph Utilities and bring back the UI to its default settings.

5.3 Menus

The following menus are available in DD2.0.

5.3.1 File

The File menu includes the following options:

- **Save settings**
  To save sensor configuration as a text file.

- **Load settings**
  To load saved configuration from text file.

- **Exit**
  To close Development Desktop 2.0.

5.3.2 Interface selection

5.3.2.1 Board communication

You can choose the communication mode between the board and PC to establish a USB or COM interface. You can access the COM interface via a RS232 cable or through Bluetooth virtual COM connection.

Follow these steps to change the communication Interface:

1. Click **Interface Selection** -> **Board communication**. The Communication Interface dialog appears.
2. Here, **Interface** displays the current mode of communication. If **Communication Status** is green, the connection is active.
3. To change the Interface, click **Disconnect**. **Communication Status** turns red. Click **Interface** to select the desired interface. **Communication Status** turns green implying that the connection has been established. If you select Bluetooth, you will be prompted to enter the 4-digit pass code. “0000”.

5.3.2.2 Sensor Interface.
This specifies the communication protocol for sensor interface. Bosch Sensortec provides SPI and I2C protocols to read or write data from sensor. The interfaces are completely configurable.
5.3.3 Panels

Panels are the views to monitor and configure sensor data. The number of views can vary from sensor to sensor.
To open any view, click on the respective panel.
To rearrange the views to the default setting, click the Default View.

5.3.4 Settings

5.3.4.1 VDD / VDDIO
These are the sensor voltage levels. The VDD value represents the supply voltage for the sensor and ranges from 1800 mV to 3600 mV. The value of VDDIO ranges from 1200 mV to 3600 mV. For proper functioning of sensor, please take extra care while setting up voltage levels.
By default, the optimum voltage levels are set.

![Figure 20. VDD/VDDIO](image)

5.3.4.2 Firmware Upgrade
DD2.0 supports firmware upgrade to re-flash the Application/ Development board. It is recommended to flash the firmware that comes along with the Installer. The corresponding firmware for the respective version of DD2.0 can be found under Firmware in the DD2.0 installation directory.

Follow the simple steps to upgrade the firmware.

1. Click on Settings -> Firmware Upgrade
2. Click **Enter Boot mode**

![Figure 22. Enter Boot Mode](image)

3. Switch off board, and press **Switch 2**.
   a. In Development board, the LCD will display Application boot loader.
   b. In Application board, all four LEDs will glow simultaneously.

4. Click **OK**.
5. For development board LCD will show “Application boot loader” and for application board the four LEDs will glow simultaneously. Press Ok button.

![Figure 23. Application Boot Loader](image)
Figure 24. Boot Mode Detected

6. Select the firmware update file (*.fwu). The default file is available in Firmware, under the Development Desktop 2.0 installation directory.

7. Click Flash

Figure 25. Start Firmware

8. After a successful firmware update, close the Firmware Update window and restart the Application/Development board.

9. Restart the DD2.0.

*Bosch Sensortec recommends USB or wired UART for firmware update*

5.4 Data Export

The output values of sensor signals are logged to a file using Data Export. The file is in the destination path of the application.

Follow these steps to carry out the data export:
1. Click **Data Export** (or) ALT + D.

![Data Export](image)

Figure 26. Data Export

1. Select file for data acquisition, sensor data, and units for logging.
2. Select **Append/Overwrite** and check **Enable Data Log**.
3. Click **Start Streaming**.

6. **General troubleshooting**

The following are the general guidelines to be followed while working with the Development Desktop:

- Ensure that the shuttle board with the valid sensor is seated properly in the development board.
- Ensure that the PC-board connection is properly established.
- Close and restart the DD2.0 application when you switch the board off and on during operation.
- Ensure that at least one channel is selected.

Follow these steps to check the USB connection:
1. On the desktop, right click on **My Computer** and select **Manage**. This opens the **Computer Management** window.

2. Under **System Tools**, select **Device Manager**.

3. Click **Human Interface Devices** and check for the USB connection.

When data transfer between PC and Development board does not work despite the USB device being properly enumerated, the cause can be that an older Development board with the same USB PID (Product ID) and VID (Vendor ID) has been used with this computer before. In this case, Windows cannot install the required drivers automatically. Follow these steps to check the USB connection:

1. Right-click on the USB-device corresponding to your Development board (if you are not sure which device corresponds to your Development board, unplug all other USB devices like keyboard and mouse temporarily).

![Figure 27. Troubleshooting (1/2)](image-url)
2. From **Action**, select **Scan for hardware changes**. The new USB driver is installed automatically. Thereafter, the device communication will function properly.

![Image of Device Manager with USB devices listed](image)

**Figure 28. Troubleshooting (2/2)**
The following table lists some of the possible faults that you might encounter and the troubleshooting methods to be followed.

<table>
<thead>
<tr>
<th>Condition</th>
<th>Possible cause</th>
<th>Solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>If Communication Status remains red after checking the Start.</td>
<td>Development board is turned off.</td>
<td>Power on the Development board and restart the application. If the board is powered by rechargeable battery, ensure that the battery is charged.</td>
</tr>
<tr>
<td>Unable to locate the data logged file.</td>
<td>Destination path not properly defined.</td>
<td>Locate the file in the setup path.</td>
</tr>
<tr>
<td>Error message “Please connect Development board” is displayed.</td>
<td>Development board is not connected properly.</td>
<td>Ensure that the PC and development board are connected properly. If the board is powered by rechargeable battery, ensure that the battery is charged.</td>
</tr>
<tr>
<td>Error message “Please connect Shuttle Board” is displayed.</td>
<td>Shuttle Board is not fixed properly.</td>
<td>Ensure that the Shuttle board is correctly fixed in the Development board.</td>
</tr>
<tr>
<td>Data Export is disabled.</td>
<td>The data is read from the sensor.</td>
<td>Click Stop. Data Export option will be enabled.</td>
</tr>
<tr>
<td>Error message “Failed to retrieve VDD, please retry” is displayed.</td>
<td>Development board is turned off.</td>
<td>Power on the Development board and restart the application.</td>
</tr>
<tr>
<td>Error message “Please select a path or file for logging” is displayed.</td>
<td>Destination path for saving the logged data is not defined.</td>

7. Legal disclaimer

7.1 Engineering samples

Engineering Samples are marked with an asterisk (*), or (e), or (E). Samples may vary from the valid technical specifications of the product series contained in this data sheet. They are therefore not intended or fit for resale to third parties or for use in end products. Their sole purpose is internal client testing. The testing of an engineering sample may in no way replace the testing of a product series. Bosch Sensortec assumes no liability for the use of engineering samples. The Purchaser shall indemnify Bosch Sensortec from all claims arising from the use of engineering samples.

7.2 Product use

Bosch Sensortec products are developed for the consumer goods industry. They may only be used within the parameters of this product data sheet. They are not fit for use in life-sustaining or security sensitive systems. Security sensitive systems are those for which a malfunction is expected to lead to bodily harm or significant property damage. In addition, they are not fit for use in products that interact with motor vehicle systems.

The resale and/or use of products are at the purchaser’s own risk and his own responsibility. The examination of fitness for the intended use is the sole responsibility of the Purchaser.

The purchaser shall indemnify Bosch Sensortec from all third party claims arising from any product use not covered by the parameters of this product data sheet or not approved by Bosch Sensortec and reimburse Bosch Sensortec for all costs in connection with such claims.

The purchaser must monitor the market for the purchased products, particularly with regard to product safety, and inform Bosch Sensortec immediately of all security relevant incidents.

7.3 Application examples and hints

With respect to any examples or hints given herein, any typical values stated herein and/or any information regarding the application of the device, Bosch Sensortec hereby disclaims any and all warranties and liabilities of any kind, including without limitation warranties of non-infringement of intellectual property rights or copyrights of any third party. The information given in this document shall in no event be regarded as a guarantee of conditions or characteristics. They are provided for illustrative purposes only and no evaluation regarding infringement of intellectual property rights or copyrights or regarding functionality, performance or error has been made.
